Dear TRG Screen Hiring Team,

I'm writing to express my strong interest in the Senior Full-Stack Engineer position. With 5 years of production experience building scalable Java + Spring Boot services paired with enterprise Angular interfaces, I'm excited about the opportunity to bring that full-stack ownership to TRG Screen's financial market-data platform.

The Right Technical Fit

- **Full-Stack Java + Angular at Enterprise Scale:** At Dell, I led the Unified Cost Management Dashboard - a Spring Boot microservices backend powering an Angular + DevExtreme frontend. Result: 50% approval-efficiency gain and \$65M ROI. Hands-on production experience with Java, Spring Boot, REST APIs, microservices, and Angular v10+.
- **Microservices & REST API Design:** At Acko, I architected three platforms (RSA, PUD, Claims) using Spring Boot microservices behind React + Angular SDUI frontends. This taught me API contract discipline, service boundaries, and mentorship patterns for scaling codebases.
- **Measurable Impact:** RSA registrations 18% → 34.5% (+91%), registration time 12 min → 6 min, support calls 350 → 200 weekly. These reflect deep ownership of both backend reliability and frontend user experience.
- **DevOps & Production Readiness:** I drove DevOps test coverage from 60% to 97%+ and led PCF vulnerability remediation (60-70%). Comfortable owning CI/CD, Docker, and the operational rigor financial systems demand.

Why TRG Screen

Financial market-data tooling is where I want to deepen my expertise. The precision, reliability, and architectural discipline required by financial systems appeals to me - a meaningful step toward systems people depend on for real decisions. I'm drawn to TRG Screen's stability, hands-on culture, and the chance to mentor the next generation of engineers.

Mentorship & Team Contributions

I actively mentor junior engineers. At Acko, I mentored team members on RSA features and PUD logic, led API contract discussions, and drove code-quality standards through reviews. I believe great engineers lift their teams. I'm ready to contribute immediately and welcome the chance to discuss how my experience scales with your technical challenges.

Best regards,

Stevens Philip
