

Stevens Philip

Senior Full Stack Engineer · Problem-Solver · Ownership-Driven · Impact at Scale

📧 stevensp99@gmail.com · 📞 9380546501 · [linkedin.com/in/stevens-philip](#) · [stevens-philip-portfolio.vercel.app](#) · Bengaluru, India

PROFESSIONAL SUMMARY

- Full-stack engineer with 5 years building complex systems at scale. Comfortable with technical ambiguity, challenge assumptions, and move fast. Proven track record: RSA registrations +91% in 2-3 months, Dell cost dashboard \$65M ROI, Acko multi-tenant platforms serving millions. Strong in end-to-end ownership, architecture patterns, and mentorship. Thrive in environments where obstacles are opportunities and problems are rethought rather than just solved.

CORE COMPETENCIES

Full Stack Ownership

React (3+ yrs)

Spring Boot

Microservices

System Design

Architecture

Performance Optimization

Data Platforms

Problem-Solving

Mentorship

Rapid Shipping

DevOps Leadership

WORK EXPERIENCE

Software Development Engineer 2 · Full-Stack & AI-Enabled

Jan 2025 - Present

- Acko General Insurance · Bengaluru
- End-to-end fullstack ownership across RSA, PUD, Claims platforms. React frontend + Spring Boot microservices coordination. Responsible for feature delivery, architectural decisions, and mentorship across distributed teams.

RSA - Challenging Assumptions, Shipping Impact

- Challenge assumption: "Why is registration rate stuck at 18%? What if we rethink the flow?" Designed SDUI (server-driven UI) to enable rapid experiments without frontend redeploy. Built reusable components (slot-booking, garage-selection) with clean architecture.
- Impact: 18% → 34.5% (+91% registrations), 12 min → 6 min registration time (~50%), velocity +3x, shipped in 2-3 months. Established team patterns adopted across 3 platforms. Mentored fast-followers on SDUI architecture.
- Built Advisor Portal (ops tool), engineered pit/flood routing logic, PII-masked phone numbers (IRDAI compliance), Segment analytics, Growthbook feature-flag rollouts. Live tracking with Google Maps, Distance Matrix API.

PUD - Scaling Data Platforms (1,000+ Garages)

- Challenge assumption: "How do we handle 1000+ garage locations with sub-200ms render time?" Designed virtualized lists, optimized polling (exponential backoff), lazy-loaded sections, Redux with selectors + memoization. Result: <200ms renders, zero lag, confident deploys.
- Built reusable SDUI node-based navigation and data-enricher patterns; coordinated API contracts with backend teams. Result: independent team deployment, zero integration blockers, patterns adopted by RSA + Claims teams (90%+ adoption).

Claims Intelligence & Architecture

- Built Admissibility AI Agent frontend: React layer displaying AI verdicts, per-rule pass/fail breakdown, supporting evidence. Designed audit trails and SLA tracking for compliance. Mentored team on AI-specific testing and reliability patterns.
- Delivered Claims Timeline: SLA tags (On Time / At Risk / Breached), task-history navigation, IST formatting. Established patterns adopted across all claim-handler workflows. Real-time field tracking with live status updates.

Acko Global Care - Rethinking Medical Tourism (4th Place Ackathon)

- Challenge: "How do we enable optimal medical tourism decisions?" Built end-to-end AI platform: LLM-based diagnosis extraction from reports, optimal hospital/specialist recommendation, treatment cost estimation, best-doctor ranking. React frontend + Python LLM backend.

Software Engineer 2 (Promoted SDE1)

Feb 2023 - Jan 2025

- Dell Technologies · Bengaluru
- Built React/Angular + Spring Boot enterprise systems; led security & DevOps: test coverage 60% → 97%+, PCF vulnerability remediation 60-70%.

Unified Cost Management Dashboard

- Challenge assumption: "Why are cost approvals slow? What if we automate 60% and add transparency?" Designed React + Spring Boot cost management system with real-time dashboards and governance layer. Established code review standards for quality.
- Impact: 50% approval-efficiency gain, \$65M ROI in FY. Zero critical incidents. 97% test coverage. Mentored team on enterprise system design + quality infrastructure.

DevOps + Quality Leadership

- Led systematic test coverage investment (unit + integration + E2E), automated CI/CD, established code review checklist. Challenge assumption: "What if we invest in quality infrastructure?" Result: 97% coverage, confident deploys, zero critical incidents, team morale improved.

Software Engineer 1

Aug 2021 - Feb 2023

- Dell Technologies · Bengaluru
- Built Eye On Desktop Widget (Electron JS): proactive monitoring tool reducing issue-identification response time 35%. Shipped Buddy Board (Angular + Python + Spring Boot): automated data-validation dashboard eliminating manual errors across workflows.

Software Engineer Intern · AI-Enabled

Feb 2021 - May 2021

- Dell Technologies · Bengaluru
- Architected PRISMO & DISCP AI Chatbot (Rasa NLP, wake-word detection): containerized with Docker & Kubernetes, 20% efficiency gain. Built Speech Recognition Engine: 85% accuracy on DELL domain abbreviations.

KEY PROJECTS & PROBLEM-SOLVING PHILOSOPHY

Challenge Assumptions → Rethink Solutions

- **RSA Registration Rethink:** Assumed problem was feature complexity. Challenged that assumption: "What if flow complexity is the real issue?" Designed SDUI to unlock rapid experiments. Result: +91% registrations.
- **PUD Performance Rethink:** Assumed 1000+ garages required backend magic. Challenged that: "What if frontend is the bottleneck?" Optimized rendering (virtualization, lazy-loading), polling (exponential backoff), state (Redux selectors). Result: <200ms renders.
- **Cost Approval Rethink:** Assumed slow approvals required process redesign. Challenged that: "What if automation + transparency fixes it?" Built intelligence layer. Result: \$65M ROI, 50% efficiency gain.

Architecture That Scales Teams, Not Just Code

- **SDUI Pattern:** Server-driven UI enables backend to own flow logic (config), frontend renders dynamically. Result: Teams ship independently. No frontend redeploy needed for product changes. 3 platforms (RSA, PUD, Claims) on shared primitives.
- **API Contracts:** Established standards (versioning, error handling, pagination, 24h response SLA). Led design meetings, documented patterns, mentored teams. Result: Zero integration surprises, independent shipping, clear governance.
- **Mentorship Culture:** Mentored juniors on SDUI, PUD logic, component architecture, performance optimization. Led code reviews, established standards. Team learned ownership mindset + quality discipline.

Speed + Quality Simultaneously

- **Rapid Shipping:** RSA +91% in 2-3 months. Comfortable with timeline pressure, high quality bar simultaneously. Build prototypes fast, iterate with data, ship with confidence.
- **Quality Infrastructure:** Dell: drove 60%→97% test coverage. Automated CI/CD, established code review checklist. Result: confident deploys, zero incidents. Quality infrastructure enables speed.

Data Platforms & Complex Systems

- **Multi-Tenant Architecture:** Acko RSA/PUD/Claims serving millions with consistent experience. Handled data consistency, scale, reliability. Designed APIs for independent team shipping without bottlenecks.
- **High-Throughput Systems:** PUD garage steerability logic, real-time status polling, audit trails. Claims analytics with millions of transactions. Dell cost dashboard petabytes of data. Comfortable with scale thinking.
- **Analytics & Visibility:** Segment integration, real-time dashboards, audit trails, SLA tracking. Designed systems where observability is baked in.

Owned Mindset

- **End-to-End Ownership:** Problem statement → design → prototype → production. Not "developer", but "problem solver". Own outcomes, not just features.
- **Comfortable with Ambiguity:** Not all requirements are clear upfront. Thrive on discovery, iteration, customer feedback loops. Build confidence through rapid experimentation.
- **Mentorship Multiplier:** Better to scale your thinking through teams than to scale yourself. Invested in junior engineers' growth.

TECHNICAL SKILLS

Frontend	React (3+ yrs production), TypeScript, JavaScript (ES6+), SCSS, Sass, CSS Modules, Tailwind CSS, Styled Components, Material UI, Design Systems, SDUI
Backend	Spring Boot, Python, Node.js, REST APIs, Microservices architecture, API contract design, BFF Pattern
Architecture	Distributed Systems, System Design, Performance Optimization, State Management (Redux), Component Architecture, Scalability patterns, Data platforms
DevOps & Cloud	Docker, Kubernetes, AWS, PCF, CI/CD, Git, GitHub, Testing infrastructure, Code quality automation
AI & Modern Tooling	Gen AI, LLM APIs, Prompt Engineering, NLP, Production AI patterns, GitHub Copilot, AI testing
Databases & Analytics	MongoDB, Oracle, SQL, Segment, Growthbook, Datadog, Google Maps API, JIRA, Figma, Feature flags, Observability

EDUCATION & ACHIEVEMENTS

B.Tech - Computer Science

Sikkim Manipal Institute of Technology
2017 - 2021 · CGPA: 9.69 / 10

High School Diploma - Computer Science

St. Columba's School, New Delhi
2013 - 2017 · Grade: 9.2

- ✓ Patent Authorised - DELL: TIDE Hack2Evolve - Gen AI for Code Reusability & Sustainability
- ✓ 1st - GSCM-TECH-A-THON, DELL: Parquet automation: 8 hrs → 2 min for large data files
- ✓ 4th - Ackathon 2024, ACKO (Jan 2025): Acko Global Care - AI-powered medical tourism platform
- ✓ 3rd - Code-Zen, Coding Ninjas: Competitive coding, Tech ADRISHTA '19
- ✓ 3rd - Hackathon v1.0, HackerEarth: C++ String Eliminator game, 33 teams
- ✓ Debashish Chatterjee Award: Highest marks in Computer Science
