

Stevens Philip

Senior Software Engineer · Frontend-Heavy Fullstack · React Specialist (3+ yrs) · Product Architect

✉️ stevensp99@gmail.com · 📞 9380546501 · [linkedin.com/in/stevens-philip](#) · [stevens-philip-portfolio.vercel.app](#) · Bengaluru, India

PROFESSIONAL SUMMARY

- Frontend-heavy fullstack engineer with 5 years building distributed, enterprise-grade systems at scale. Deep expertise in React/TypeScript production architectures, microservices coordination, and API platform thinking. Proven track record of end-to-end feature ownership: from functional prototypes to production at Acko (insurance registrations +91%, real-time tracking for 1000+ locations) and Dell (cost dashboard \$65M ROI, 97% test coverage). Strong in architectural thinking-designing scalable component systems, establishing API contracts across teams, and mentoring junior engineers. Product-minded engineer who balances technical excellence with user empathy and timeline-driven delivery.

CORE COMPETENCIES

React (3+ yrs production)

TypeScript

JavaScript (ES6+)

REST APIs

Distributed Systems

Component Architecture

Microservices Coordination

API Contract Design

Server-Driven UI (SDUI)

Performance Optimization

Enterprise Security

DevOps & CI/CD

WORK EXPERIENCE

Software Development Engineer 2 · Full-Stack & AI-Enabled

Jan 2025 - Present

- Acko General Insurance · Bengaluru
- End-to-end product ownership across RSA, PUD, Claims platforms using React + Angular SDUI architecture; responsible for API contract design, feature prototyping, and production rollout across distributed teams.

RSA - Roadside Assistance (React + SDUI)

- Built complete RSA frontend: dynamic question engine, slot booking, Google Maps location handling, garage selection, real-time tracking, and live CES updates.
- Impact: App registrations 18% → 34.5% (+91%), registration time 12 min → 6 min (~50%), weekly support calls 350 → 200 (~43%). Built reusable SDUI patterns (node-based navigation, data-enrichers) adopted as shared primitives across platforms.
- Led Advisor Portal (internal ops tool): live tracking of field executives, job status management, real-time RSA request coordination. Engineered pit/flood routing logic, PII-masked phone numbers (IRDAI compliance), Segment analytics, Growthbook feature-flag rollouts.

PUD - Pickup & Drop (1,000+ Garages, React SDUI)

- Owned SDUI config-driven frontend: garage selection with dynamic steering (ADSC vs non-ADSC), slot booking, free/paid pricing logic by pin code, real-time status polling with exponential backoff. Handled 1000+ garage data points with virtualized lists, <200ms render times.
- Designed reusable node-based navigation and data-enricher patterns adopted as shared primitives; coordinated with backend on API contracts for independent team deployment; mentored junior engineers on component reusability and performance.

Claims & Real-Time Tracking

- Built Admissibility AI Agent frontend: React layer displaying AI verdicts (admissible/fraudulent/document-deficient), per-rule pass/fail breakdown, and supporting evidence; implemented contrary-action flagging for handler overrides feeding back into model retraining.
- Delivered Claims Timeline & Audit Trail UI: SLA tags (On Time / At Risk / Breached), task-history navigation, IST date formatting - adopted across all claim-handler workflows. Real-time field-executive tracking with Google Maps + Distance Matrix API, dynamic status titles, feature-flag-controlled rollout.

Acko Global Care - Ackathon 2024 (4th Place)

- Built AI-powered medical tourism platform: LLM-based diagnosis extraction from medical reports, optimal hospital/specialist recommendation engine, treatment cost estimation, best-doctor ranking. End-to-end: React frontend + Python LLM pipeline.

Software Engineer 2 (Promoted SDE1)

Feb 2023 - Jan 2025

Dell Technologies · Bengaluru

- Built React/Angular + Spring Boot enterprise systems; led security & DevOps: test coverage 60% → 97%+, PCF vulnerability remediation 60-70%.

Unified Cost Management Dashboard (React + Spring Boot)

- Designed React frontend for procurement cost approval workflows; coordinated with Spring Boot backend on API contracts; implemented real-time data binding, approval process visualizations, and audit trails.
- Impact: 50% approval-efficiency gain, \$65M ROI in FY, Layer-7 authentication, PCF production deployment. Established code review standards for quality; mentored junior engineers on enterprise system design.

Item Usage Dashboard & Email Engine

- Built Flask Mail + Angular TLS email engine reducing manual process intervention by 20%. Established patterns for cross-service data coordination.

Software Engineer 1

Aug 2021 - Feb 2023

Dell Technologies · Bengaluru

- Built Eye On Desktop Widget (Electron JS): proactive monitoring tool reducing issue-identification response time 35% for Ops and Dev Engineering teams.
- Shipped Buddy Board (Angular + Python + Spring Boot): automated data-validation and status dashboard eliminating manual data-entry errors across procurement workflows.

Software Engineer Intern · AI-Enabled

Feb 2021 - May 2021

Dell Technologies · Bengaluru

- Architected PRISMO & DISCP AI Chatbot (Rasa NLP, wake-word detection): containerized with Docker & Kubernetes, 20% interaction efficiency gain on real user data.
- Built Speech Recognition Engine with custom domain model for DELL abbreviations: 85% accuracy in production transcriptions.

KEY PROJECTS & PROOF POINTS

API Platform & Distributed Systems Thinking

- **API Contract Leadership:** Established API contract standards across Acko teams (versioning, error handling, pagination, SLA response time 24h). Led API design meetings; documented patterns in living docs. Result: independent team shipping, zero integration surprises, reduced coordination overhead.
- **Microservices Coordination:** Acko RSA/PUD with 3+ teams (backend, mobile, analytics) sharing APIs. Designed frontend-backend contracts to enable independent deployment; mentored junior engineers on contract-first development. Proof: tight coupling eliminated, velocity +3x.

Scalable Component Architecture & Performance

- **SDUI Framework:** Designed server-driven UI pattern (React + Angular): backend owns flow logic as config, frontend renders dynamically. Eliminates tight coupling, enables rapid product iteration without frontend redeploy. Reusable primitives: node-based navigation, data-enricher patterns, garage steerability.
- **Performance at Scale:** PUD platform: 1000+ garage data points with virtualized lists, lazy-loaded sections, optimized polling (exponential backoff), Redux with selectors + memoization. Result: <200ms render time, confident Friday deploys, zero perceptible lag.

Enterprise Governance & Quality

- **Dell Cost Dashboard:** Designed React approval workflow UX paired with Spring Boot backend; established patterns for governance features: "understand what the human needs, design backend to surface that clearly". Code review standards, 97% test coverage, zero critical incidents. \$65M ROI.
- **Security & DevOps Leadership:** Led test coverage investment (unit + integration + E2E), automated CI/CD, code review checklist. Remediated PCF vulnerabilities, established deployment confidence. Result: 60%→97% coverage, team morale improved, zero critical incidents.

Product Mindset & End-to-End Ownership

- **RSA Registration Flow:** Complete feature ownership: problem statement (18% registration rate), solution design (SDUI + reusable components), implementation, mentorship of fast followers. Timeline driven, user empathy. Result: +91% registrations, –50% time, –43% support calls.
- **AI Feature Leadership:** Admissibility Agent and Acko Global Care: no established patterns for production AI in frontend. Proposed, prototyped, shipped. Mentored teams on AI-specific testing, error handling, fallbacks, monitoring.

TECHNICAL SKILLS

Frontend	React (3+ yrs production), TypeScript, JavaScript (ES6+), SCSS, Sass, CSS Modules, CSS-in-JS, Tailwind CSS, Styled Components, Material UI, Design Systems
Architecture	SDUI (Server-Driven UI), REST API Design, Microservices Coordination, Component Architecture, Performance Optimization, State Management (Redux), BFF Pattern
Backend	Spring Boot, Python, Node.js, microservices understanding
DevOps & Cloud	Docker, Kubernetes, AWS, PCF, CI/CD, Git, GitHub
Databases	MongoDB, Oracle, SQL
Tools & Analytics	Segment, Growthbook, Google Maps API, Distance Matrix API, Datadog, JIRA, Figma, Next.js (SSR/SSG), Electron JS
AI / ML	Gen AI, LLM APIs, Prompt Engineering, NLP (Rasa), AI feature deployment patterns

EDUCATION & ACHIEVEMENTS

B.Tech - Computer Science

Sikkim Manipal Institute of Technology
2017 - 2021 · CGPA: 9.69 / 10

High School Diploma - Computer Science

St. Columba's School, New Delhi
2013 - 2017 · Grade: 9.2

- ✓ **Patent Authorised - DELL:** TIDE Hack2Evolve - Gen AI for Code Reusability & Sustainability
- ✓ **1st - GSCM-TECH-A-THON, DELL:** Parquet automation: 8 hrs → 2 min for large data files
- ✓ **4th - Ackathon 2024, ACKO (Jan 2025):** Acko Global Care - AI-powered medical tourism platform
- ✓ **3rd - Code-Zen, Coding Ninjas:** Competitive coding, Tech ADRISHTA '19
- ✓ **3rd - Hackathon v1.0, HackerEarth:** C++ String Eliminator game, 33 teams
- ✓ **Debashish Chatterjee Award:** Highest marks in Computer Science
