PROFESSIONAL SUMMARY

Full-stack engineer with 5 years building production agentic systems and LLM orchestration pipelines at Acko General Insurance and Dell Technologies. Architected the Admissibility AI Agent - an event-driven agentic orchestration system that autonomously classifies claims via configurable rule engines, with complete decision memory and audit trail - and delivered a multi-stage LLM automation pipeline (Acko Global Care) covering requirements capture through remediation. Strong Python and backend systems experience across AI, NLP, and high-throughput APIs. Targeting Staff-level agentic automation roles where production AI systems drive measurable workflow outcomes.

CORE COMPETENCIES

Agentic System Design

LLM Orchestration Pipelines

Event-Driven Architecture

Decision Memory & Audit Trails

ADLC Automation

AI Observability & Guardrails

Backend Systems Engineering

Python · Spring Boot · TypeScript

WORK EXPERIENCE

Acko General Insurance Jan 2025 - Present

Software Development Engineer 2 - AI-Enabled · Bengaluru

- Admissibility AI Agent - Agentic Claims Orchestration:** Architected an event-driven agentic orchestration system with a configurable rule engine and multi-stage analysis pipeline. Autonomous lifecycle: intake trigger → ML-based cross-reference of damage reports and incident descriptions → classification (admissible / fraudulent / document-deficient / manual-review) → decision audit trail. Reduced handler decisioning time at scale.
- Decision Memory Infrastructure - CES Claim Timeline & Audit Trail:** Built a durable decision memory substrate for claims workflows - comprehensive audit trail logging every agent action with SLA classification (On Time / At Risk / Breached), task-history navigation, and handler attribution. System of record for all agent decisions across claim-handler workflows; adopted across all claim teams.
- Acko Global Care - Multi-stage LLM Orchestration Pipeline (Ackathon 2024, Jan 2025 · 4th Place):** Designed and shipped a multi-stage LLM automation pipeline covering the full ADLC analogue: requirements capture (structured diagnosis extraction from unstructured medical reports) → build/validate (optimal hospital & specialist recommendation) → operate/remediate (cost estimation + fallback prompts for ambiguous inputs). End-to-end observability with structured output schema enforcement.
- RSA - Event-Driven Roadside Assistance Platform:** Engineered real-time event-sourced RSA platform - status events, Distance Matrix ETA computation, live field-executive tracking, observability-first instrumentation (Segment analytics on every user action, Growthbook for safe phased rollouts). Impact: app registrations +91%, registration time -50%, weekly support calls -43%. CES ~90%.
- PUD - SDUI Orchestration (1,000+ Garages):** Config-driven ADLC-style orchestration for pickup & drop: garage selection → slot booking → dynamic bias rules (ADSC vs non-ADSC) → real-time status polling. Reusable node-based navigation and data-enricher patterns adopted across RSA and PUD.
- Stabilised Self PI flow (fallbacks, re-upload handling, observability); delivered auto-attendance tracking & team analytics APIs for Claims handlers; mentored junior engineers on agentic feature design.

Dell Technologies Feb 2023 - Jan 2025

Software Engineer 2 (Promoted from SDE1) · Bengaluru

- Security & DevOps Lead - DISCP & One Cost (Procurement). CI/CD coverage: 60% → 97%+; PCF vulnerability remediation 60-70%.
- Unified Cost Management Dashboard:** Angular + Spring Boot - 50% approval-efficiency gain, \$65M ROI in FY. Layer-7 auth, PCF production deployment with full observability pipeline.
- Eye On Desktop Widget (Electron JS):** Proactive monitoring tool - event-driven alerting reduced issue-identification response time by 35% for OPs and Dev Engineering teams.
- Buddy Board:** Angular + Python + Spring Boot workflow automation dashboard for DISCP - eliminated manual data-entry errors across procurement workflows.

Software Engineer Intern → SDE1 · Bengaluru

- **PRISMO & DISCP AI Chatbot** (Rasa NLP, Python, wake-word detection): containerised with Docker & Kubernetes - 20% interaction efficiency gain; trained on real user conversation data.
- **Speech Recognition Engine**: Custom domain model tuned for DELL abbreviations and terminology - 85% accuracy in production transcriptions. Domain-specific NLP model fine-tuning from real conversation data.
- **Gen AI Patent (Authorised)**: TIDE Hack2Evolve - Gen AI for Code Reusability & Sustainability.

PROJECTS

DELL Supply Chain Optimisation using QUBO

Applied Adiabatic Quantum Optimisation to minimise procurement backlog by jointly optimising Net MRP, demand forecast, and inventory - systems-level workflow automation reducing logistics costs.

Python · Adiabatic Quantum Computing · Supply Chain Orchestration

Energy Prediction Model - Robotech Labs (IIT Delhi)

ML model forecasting power output for a Combined Cycle Power Plant using AWS, IoT sensor data, and regression techniques - end-to-end cloud deployment with automated pipeline from sensor ingestion to prediction output.

Python · AWS · Machine Learning · IoT · Regression · Cloud Deployment

Speech-to-Sign Language Translator

End-to-end NLP pipeline interpreting grammatical sentence structure for precise Sign Language output - speech recognition to structured gesture sequence mapping.

Python · NLP · Speech Recognition · Structured Output Mapping

EDUCATION

B.Tech - Computer Science · Sikkim Manipal Institute of Technology

2017 - 2021

CGPA: 9.69 / 10

ACHIEVEMENTS

DELL - Patent Authorised: Gen AI for Code Reusability & Sustainability (TIDE Hack2Evolve) 2024

Acko - 4th Place, Ackathon 2024: Acko Global Care - AI-powered LLM orchestration pipeline Jan 2025

DELL - 1st Place, GSCM-TECH-A-THON: Parquet automation 8 hrs → 2 min 2023

SKILLS

AI / Agentic: LLM APIs, Agentic Orchestration, Rasa NLP, Prompt Engineering, Python (AI/ML)

Backend: Spring Boot, Python, Node.js, REST APIs, Microservices Frontend: Angular (3 yrs), React, TypeScript, SDUI, BFF Pattern

Observability: Segment, Growthbook, CI/CD, DevOps, Docker, Kubernetes, PCF Data: MongoDB, Oracle, SQL
